

PRISMATIX

Enterprise project management, reimagined.

Everything your project teams need — planning, cost & earned value, governance, and an AI assistant — brought together in one clean platform.

◆ Real earned value

◆ "Anett" AI assistant

◆ Multi-tenant SaaS

◆ Bilingual · EN & ID

THE CHALLENGE

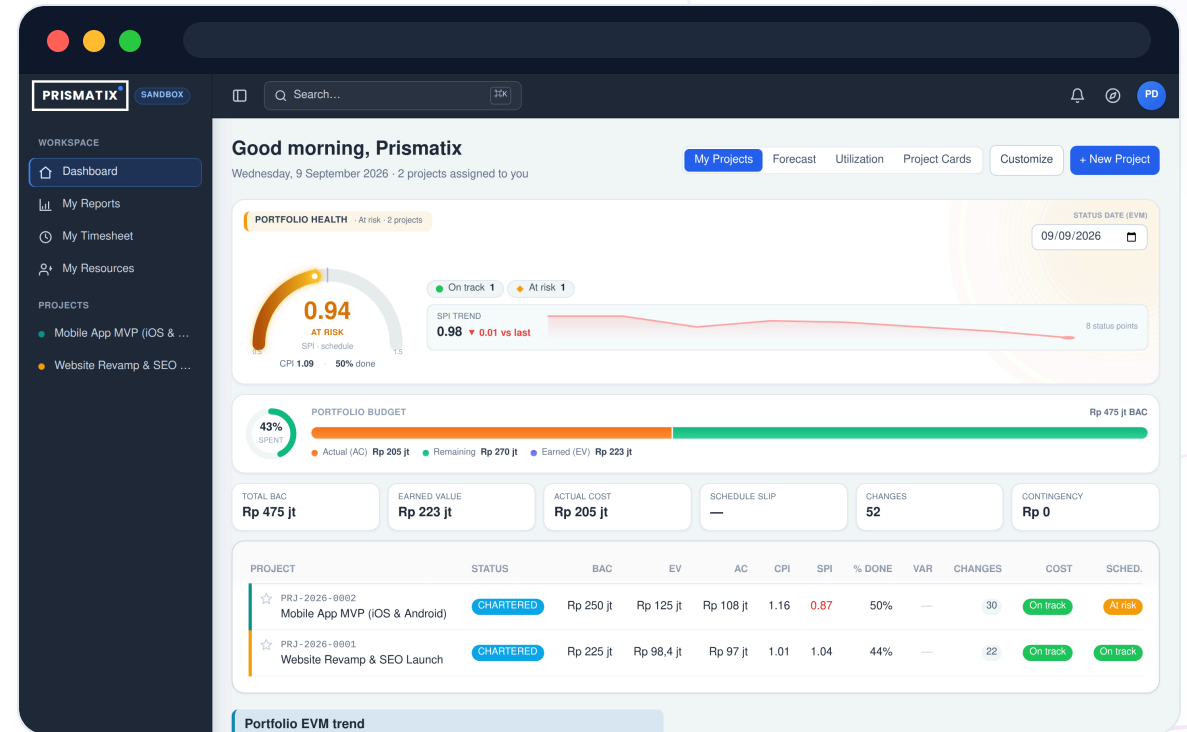

Too many tools, too little control.

- Schedule, cost, and risk live across different apps and endless spreadsheets.
- Without real earned value, project status gets guessed more than it's measured.
- Governance and audit trails depend on fragile, manual steps.
- Reports for leadership tend to arrive late — and rarely say the same thing twice.
- Predictive and agile teams end up working in separate silos.
- Client data sits together without truly secure isolation.

INTRODUCING PRISMATIX

One platform, from kickoff to closeout.

- It walks the entire lifecycle — charter, schedule, cost, execution, and closeout.
- Built around PMBOK, with governance and audit woven right in.
- Multi-tenant SaaS with per-organization subdomains and a bilingual interface.
- Not just a concept — it's already live in production today at prismatix.tech.

Six pillars, one source of truth.

Planning

WBS and a tracking Gantt, critical path, dependencies, and auto-scheduling.

Cost & EVM

BAC/PMB, CPI/SPI, EAC forecasts, an S-curve, and time-phased cash-flow.

Risk & Governance

RAID, change requests, approval workflows, and a full audit trail.

Reporting

Executive, project, portfolio, and analytics — ready as PDF or Excel.

Agile & Hybrid

A backlog, sprints, a Kanban board, and a true hybrid mode.

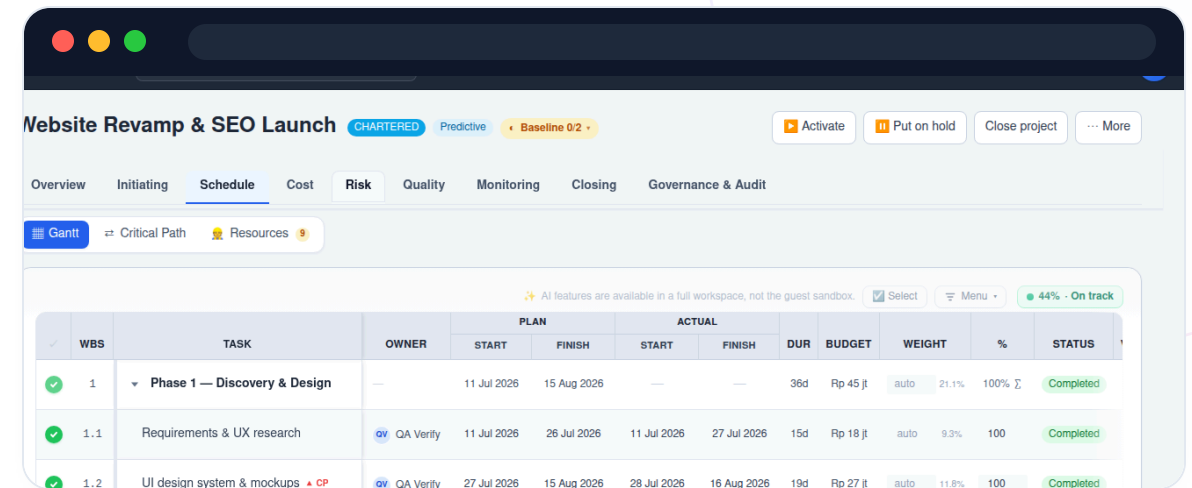

Resources

Capacity, allocation, timesheets, and team utilization at a glance.

PLANNING

A Gantt that's genuinely alive.

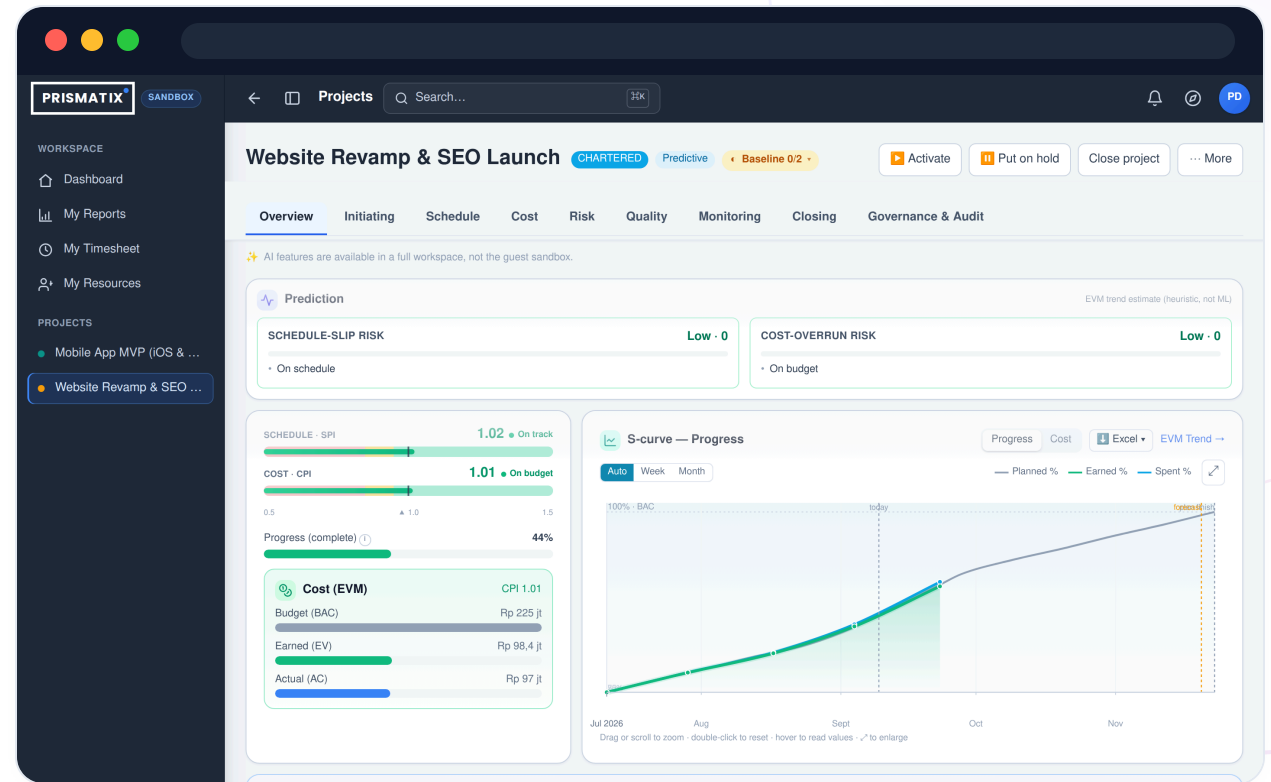

- Every task blends three layers — baseline, plan, and actual — so slippage shows itself at once.
- Critical path, dependencies, milestones, and weekend-aware auto-scheduling.
- Shape the view your way: hide columns, change density, zoom the scale, export to PDF or Excel.

COST & EARNED VALUE

Real earned value — not just percent complete.

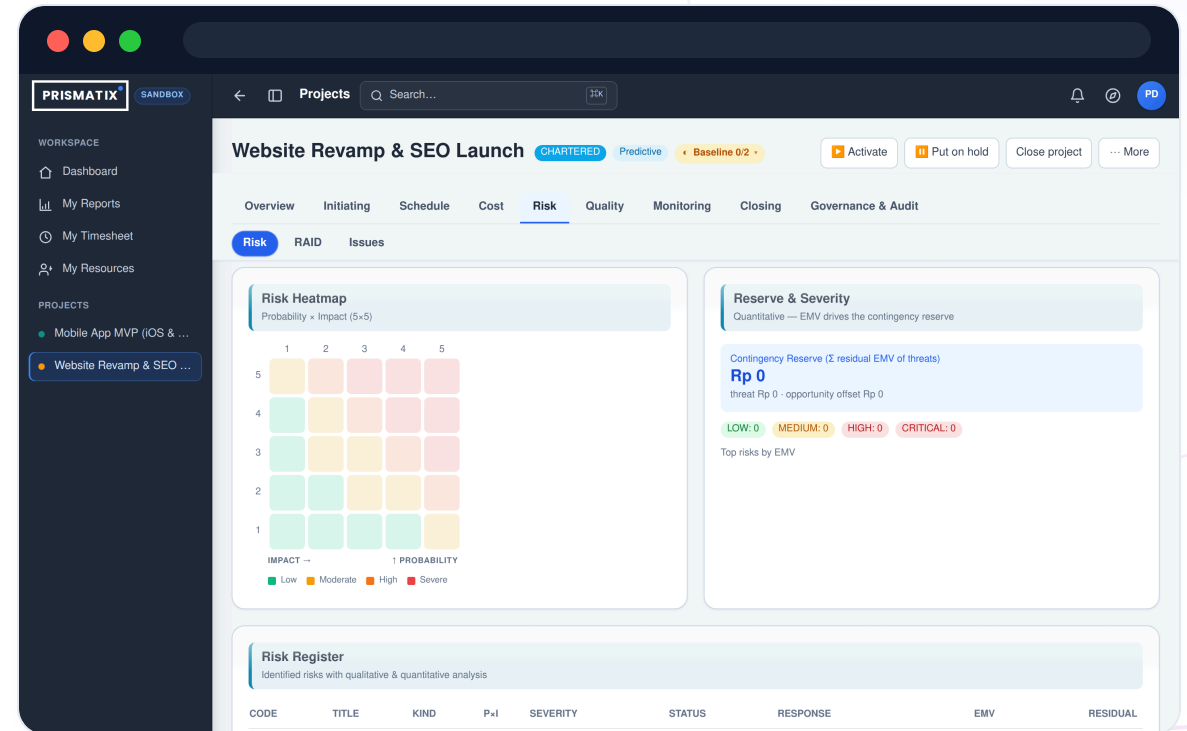

- CPI, SPI, CV, and SV show cost and schedule health at a glance.
- EAC, ETC, and VAC forecasts, with best, likely, and worst-case scenarios.
- A plan-vs-actual S-curve and time-phased cash-flow help you read the project's direction early.

GOVERNANCE & CONTROL

Locked baselines, change under control.

- The charter and baseline lock (PMB/BAC) form the formal gate before execution begins.
- Every change flows through change requests and role-based, multi-step approvals.
- A RAID/risk register and audit trail record who did what, and when.

Meet Anett, your AI project assistant.

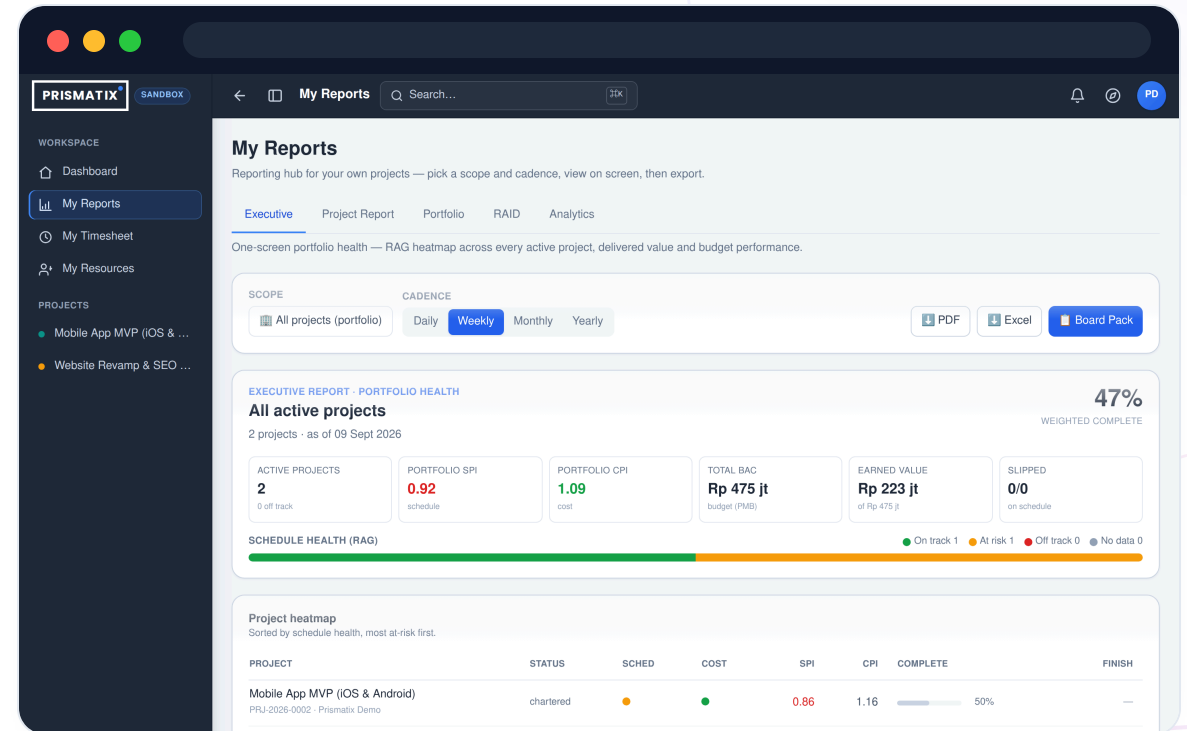

- Ask anything about your project data in plain language — answers come back as tidy tables or CSV.
- It drafts a timeline from the charter, explains your EVM numbers, and suggests risk responses.
- Proactive weekly briefings, with advice that cites PMBOK standards.
- It can propose actions and carry them out — always once you've approved.

REPORTING

Insights ready for the boardroom.

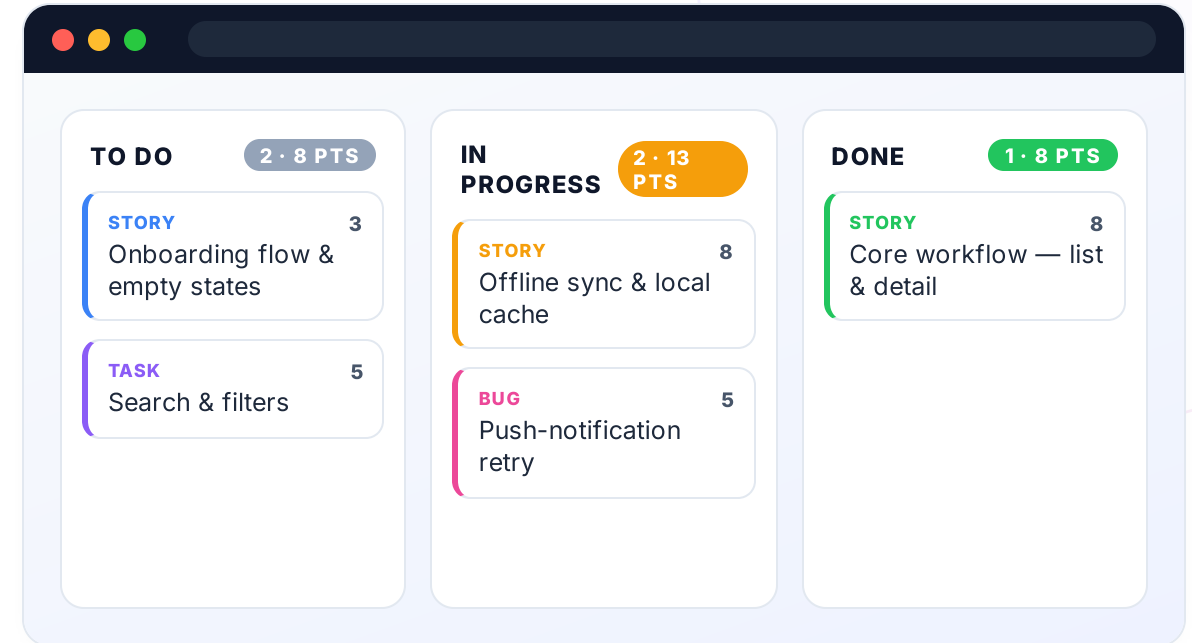

- One hub for executive, project, portfolio, and analytics reports.
- Pick a daily, weekly, monthly, or yearly rhythm — all exportable as polished corporate PDFs.
- Alert digests and notifications take you straight to the source.

AGILE & HYBRID

Predictive, agile, or both at once.

- Manage a product backlog, run sprints, and drag cards across a Kanban board.
- Story points flow into team capacity and resource utilization.
- Hybrid mode lets predictive WBS/EVM run side by side with sprints.

Open to connect, built for the enterprise.

REST API & Webhooks

Bearer keys, OpenAPI 3.1, HMAC webhooks with retries, and rate limits.

Slack · Teams · iCal

Channel notifications, calendar feeds, and Excel/CSV import.

Single Sign-On

Sign in with Google or Microsoft (Entra / Azure AD).

Multi-tenant

Fail-closed data isolation, per-org subdomains, and per-plan quotas.

Security

HTTPS/HSTS, httpOnly cookies with CSRF, and refresh-token rotation.

RBAC

Granular roles (ADMIN/PMO/PM...), custom roles, and a guest sandbox.

What sets us apart.

■ Real earned value

CPI/SPI, EAC, and an S-curve from day one

Not just a percent-complete number

■ AI that fits in

Anett queries data, drafts timelines, advises

Always human-in-the-loop

■ Serious governance

Baseline lock, CRs, approvals, audit

Aligned with PMBOK

■ Bilingual SaaS

EN/ID, multi-tenant, subdomains

Predictive and agile in one place
